

ATHANAS MUINDE

Frontend Developer

athanasmwandi5@gmail.com | +254 718 525 592 | github.com/Mwandii | athanas.vercel.app

SUMMARY

Frontend Developer specializing in React and modern JavaScript, with hands-on experience building responsive, production-ready web applications. Strong understanding of component-based architecture, state management, API integration, authentication, and backend services such as Supabase. Comfortable working across the development lifecycle, from translating requirements into clean interfaces to deployment and troubleshooting. Experienced in using AI-assisted development tools such as Claude and GPT to improve development speed, problem-solving, and code quality.

TECHNICAL SKILLS

- Core: React, JavaScript (ES6+), TypeScript, HTML, CSS
- Backend & Data: Supabase, REST API integration, TanStack, Axios, Fetch API, relational schema design, async data handling, loading/error states
- State & Routing: React Hooks (useState, useEffect, useContext), React Router, Zustand, Context API
- Styling: Tailwind CSS, responsive mobile-first design, design systems
- Data Visualization: Recharts
- Tooling & Workflow: Vite, Git/GitHub, ESLint, Vercel
- AI-Assisted Development: Claude, GPT, Cursor

PROJECTS

Kingston Complex — Hospitality Booking & Operations Platform — kingston-complex.vercel.app

React · Vite · Tailwind CSS · React Router · Supabase (PostgreSQL, Auth, RLS) · Recharts · Vercel

- Designed and shipped a full-stack platform for a live hospitality business (hotel, restaurant, bar, conference hall) — a public booking site paired with a secure, staff-only admin system.
- Modeled a relational PostgreSQL schema across five tables (three booking types, payments, reviews) with Row Level Security policies enforcing public vs. staff-only access at the database layer.
- Built real authentication (Supabase Auth) with protected admin routes — no public sign-up, session-aware route guards.
- Engineered a deposit/partial-payment system: bookings carry a total price against any number of linked payments, with live outstanding-balance tracking.
- Built a finance reporting module attributing revenue by service date across three revenue streams, with day/week/month/year filtering and a Recharts trend visualization.
- Delivered a fully responsive component system (shared hooks, calendar, and form primitives) reused across four public-facing service pages and five admin views.
- Deployed on Vercel with environment-based configuration and SPA routing rewrites.

Kandy Baby Store — Multi-Vendor E-Commerce Platform — kandy-store.vercel.app

React · JavaScript · Tailwind CSS · React Router · Vercel · Resend

- Architected a full multi-vendor platform with vendor dashboards, product listings, cart management, and multi-step checkout.
- Built a centralized siteData.js content layer, decoupling client-facing copy from component logic for zero-code content updates.
- Engineered a serverless order-notification system via Vercel API routes with Resend, including input validation and structured error handling.
- Delivered scroll-triggered animations with raw IntersectionObserver — no libraries, tuned for performance with willChange and rootMargin.
- Maintained a production-grade codebase: ESLint, .env.example, vercel.json SPA rewrites, documented README.

Mwandi's Sneakers — Sneaker Resale E-Commerce Platform — mwandissneakers.vercel.app

React · Vite · Tailwind CSS · React Router · vercel

- Building a full sneaker resale storefront with a category-based catalogue, product detail pages, and a WhatsApp-based ordering flow with M-Pesa payment.
- Applied the same API-ready data architecture used across other projects: catalogue and order data are structured and fetched as if from a backend, so the UI requires no changes once real endpoints exist.

- Currently finalising production content — replacing placeholder product imagery with final photography before full launch; core build, routing, and order flow are complete.

Kelijah Auto Spares & Garage — kelijah.vercel.app

React · Vite · Tailwind CSS · React Router · Vercel

- Built a customer-to-vendor booking platform connecting customers with garage services via a structured WhatsApp booking flow.
- Designed the data layer to mirror a real API response, so a backend can be introduced as a drop-in replacement rather than a refactor.
- Resolved a live production incident — identified and purged an accidentally committed .env file from Git history using git filter-branch.

Graken Events — Premium Events & Decor Website — grakenevents.vercel.app

React 18 · Tailwind CSS · React Router v6 · Vercel · Resend

- Built a responsive luxury events platform with reusable component architecture and structured routing.
- Powered the contact form with an async Resend workflow (loading, validation, and error states), delivering visitor inquiries directly to the business owner in real time.

EXPERIENCE

Frontend Engineer — Ensitu Gems & Jewelry, Remote · Nov 2025 – Dec 2025

- Architected a 15-page e-commerce frontend covering product catalog, shopping cart, and multi-step checkout, delivered on time to the client's specifications.
- Implemented secure authentication with separate flows for authenticated vs. guest users and persistent session state via Context API.
- Built order management UIs — real-time order tracking, wishlist, and order history dashboards — wired to backend REST APIs.
- Integrated multiple payment gateways with dedicated interface pages and comprehensive loading/success/failure state management.
- Collaborated with backend developers via Git branching workflow — code reviews, PR conventions, and merge conflict resolution.

EDUCATION

ALX Software Engineering Program — Front-End Development Specialization — Mar 2025 – Nov 2025

- Intensive program covering modern frontend practices, component architecture, state management, and production-ready code.

KEY STRENGTHS

- Owning projects end-to-end — from architecture and backend design through to deployment
- Proven ability to build and secure real backend systems alongside polished frontend work
- Designing frontend data layers to be backend-agnostic when needed, and building the real backend when the project calls for it
- Strong Git discipline: branching, PRs, conflict resolution, and incident response under real production conditions
- Productive with AI coding tools (Claude, GPT) as part of a professional workflow
- Remote-ready, async-first, fast learner expanding into TypeScript and full-stack patterns
